## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

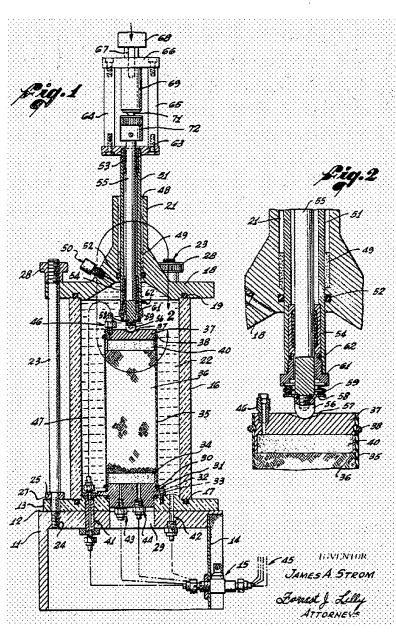

- 1. The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-5, 9-11, 13-17, 20-22, 24 and 26 are rejected under 35 U.S.C. § 103(a) as being unpatentable over US 3,616,685 to Strom and US 6,935,159 to Knight et al. Strom discloses a device and method for measuring the properties associated with aerated particles (Fig. 1 below) including: an outer container (16) containing a fluid; an inner container positioned in the outer container and having at least one inlet (43, 44) at the bottom portion of the inner container and at least one outlet (46) at the top of the inner container (as recited in claims 1, 5, 16 and 17) for admitting/releasing a gas; inlet and outlet filters (34, 40) (as recited in claim 4); at least one load application device (Fig. 2) being a piston formed form a head coupled to a shaft (as recited in claims 10 and 21) passing through an outside wall (18) of the outer container and forming an end of the inner container, and a pressure sensing device (44) to be connected to the inner container (Strom: col. 4, lines 29-37) (as recited in claims 11 and 22); wherein the inner container is formed of a rubber membrane (note: latex is a form of rubber) (as recited in claims 2, 3, 14, 15); determining the load applied to the applied to the sample particulate (Strom: col. 4, lines 11-28) (as recited in claims 24 and 26). Strom does not expressly disclose a device and method for measuring properties associated with aerated particles wherein the fluid contained in the outer container is usable to determine changes in volume of aerated particles contained in the inner

Art Unit: 2856

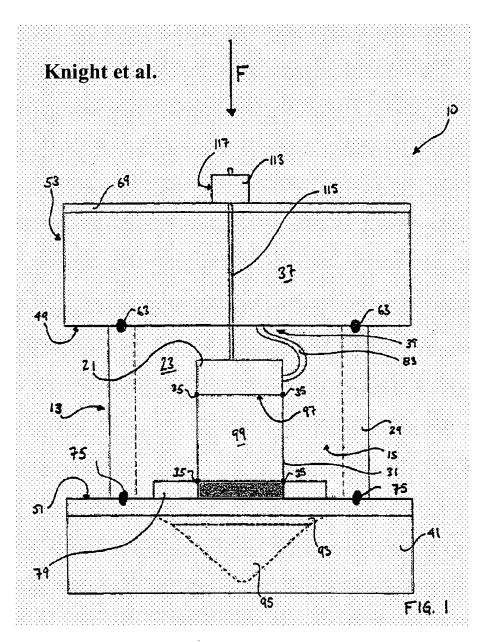

container (i.e. volumetric change) (as recited in claims 1, 13 and 24) by monitoring the change in volume or level of the fluid in the outer container; or a storage device (i.e. computer/processor) to store acquired/measured data parameters (as recited in claims 9, 20 and 26). Knight et al. disclose a device and method for measuring the properties associated with aerated particles (Figs. 1-13) having many of the recited elements, including an outer rigid container and an inner flexible/resilient container being made of latex, an inlet and outlet, application of a force/load via centrifugal means further including sensor for measuring the load applied and pressure changes as well as a change in volume of the sample particles (Knight et al.: col. 2, lines 1-28); and a computer/processor (151) for receiving/storing data and performing calculations. It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ sensors measuring the volume change and a computer/processor storage device, as taught by Knight et al., modifying the device/method for measuring properties associated with aerated materials disclosed by Strom, thus providing a means to determine the degree of sample/material consolidation exhibited by the sample during the load application process and sending/storing a signal to a receiver/processor indicative of the change (Knight et al.: col. 2, lines 16-20). Note: Functional recitation(s) using the words "for" (i.e. "for measuring," and "for admitting a gas") have been given little patentable weight because they fail to add any structural limitations and thereby regarded as intended use language. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In re Finstewalder, 436 F.2d 1028, 168 USPQ 530 (CCPA 1971); In re Casey, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) ("The manner or method in which such machine is to be utilized is not

Art Unit: 2856

germane to the issue of patentability of the machine itself."); *In re Otto*, 136 USPQ 458, 459 (CCPA1963). When interpreting functional language, if the prior art is capable of performing the claimed function-even if not directly disclosed-it anticipates. *In re Schreiber*, 128 F.3d 1473, 1478, 44 USPQ2d 1429, 1432 (Fed. Cir. 1997); *In re Sinex*, 309 F.2d 488, 135 USPQ 302 (CCPA 1962). See also MPEP § 2114, 2115.

Art Unit: 2856

Allowable Subject Matter

3. Claims 6-8, 12, 18, 19, 23,25, 27 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2856

## Conclusion

Page 6

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant is invited to review the Prior Art recited on accompanying PTO 892 form for relevant art to the instant invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Fitzgerald whose telephone number is (571) 272-2843. The examiner can normally be reached on Monday-Friday from 7:00 AM to 3:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hezron Williams, can be reached on (571) 272-2208. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
